

ABC Science Activity Book for Young Children

You will each be assigned random letters of the alphabet for this activity book. You will find recipes and/or directions for science activities geared to young children, preferably Pre-K through K-2 that begin with your assigned letters. You will type up the pages and then we will put together a class book that will be shared with everyone. Remember for safety reasons these activities should have adult supervision so be sure there is evidence of that in your directions.

Each entry should be creative, colorful, contain graphics and be geared to young children. Each entry should also contain the following:

- Title...Name of the Activity (should begin with your assigned letter(s))
- Materials or Ingredients Needed
- Step by Step Directions
- A Picture of the Activity or Product
- A brief explanation of what the child can learn from this activity.

In addition to the above, each student will create a creative COVER page for the completed book titled "ABC Science Activity Book for Young Children". The covers will be voted on and the cover receiving the most votes will be used on the books! So, may the best cover win!

Rubric
